

Passive Electrostatic

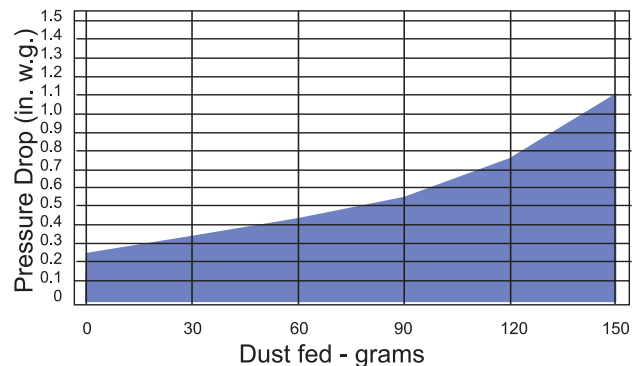

The NaturalAire Electrostatic is a passive electrostatic air filter. It uses a special combination of media to electrostatically charge airborne particles and pull them from the airstream. But it does not rely on external power supply to create that attraction. Instead, the friction of air passing over the special synthetic filter components causes the electrostatic attraction to occur naturally.

Because no external power supply is needed, the NaturalAire Electrostatic is a fast, easy and economical upgrade from ordinary spun glass filters. It is available in all of the most common face sizes, 1" depth and 2" depth, as well as almost any "special" size.

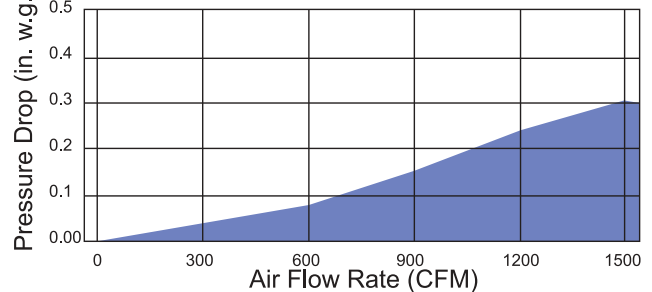

Use it for years.

Wash this unique filter out just once a month, let it dry and re-install. You can use it over and over again. It has a 5 year limited warranty.

Dust Fed vs. Resistance

Initial Resistance vs. Air Flow Rate

Key Features

- Passive Electrostatic
- Needs no external power
- Wash and re-use
- 5 year limited warranty
